

# PORCE II SYSTEM #17114 1994-1997 FORD MUSTANG

4.6L & 5.0L ENGINE

9/14/09

#### Removal:

- 1) Raise the vehicle up on a hoist or rack to working height. If you do not have access to a hoist or rack raise the vehicle and support securely with jack stands.
- 2) Separate the steel tailpipe hangers from the rubber mounts at the rear of each tailpipe. A lubricant may ease removal.
- 3) Using a hacksaw or sawsall, cut the stock tailpipes off, approximately 2" behind the muffler case.
- 4) Remove the stock tailpipes from the vehicle.
- 5) Support the stock mufflers with stands and separate the steel hangers from the rubber mounts at the rear of each muffler.
- 6) Remove the two bolts at the muffler to catalytic converter connections and remove the mufflers from under the vehicle.

#### Installation:

- 1) Before installing anything, prep the clamps supplied in the hardware kit by removing the nuts, and applying a thick lubricant such as white grease or anti-seize to the threads.
- 2) Position the right muffler **#942553-101** on the right side of the car in the stock location. Reinstall the factory nuts at the flange connection.
- 3) Connect hanger/clamp **#127HA** to the rubber mount behind the right muffler and attach the clamp to the muffler outlet.
- 4) Slip tailpipe **#16247** over the rear axle and into the muffler outlet.
- 5) Slide tailpipe hanger-rod into stock rubber hanger at the rear of the vehicle.
- 6) Repeat steps 2 through 5 on the left side of the vehicle using muffler **#942553-102**, hanger **#128HA** and tailpipe **#16246**.
- 7) Adjust the position of the muffler and tailpipes to provide a satisfactory fit. Maintain a minimum of 3/4" clearance between the Flowmaster system, the drivetrain and chassis components, while also keeping suspension travel and vibration in mind.

- 8) Tighten down all clamped connections securely. After the system is secure, slide 7/16" hanger keepers onto the end of the hangers located at the rear of them mufflers and tailpipes. This will prevent the hangers from slipping out of the rubber mounts.
- 9) For a cleaner appearance and more secure installation, we highly recommend welding all slipfit connections. If you live in a geographical area that has harsh winters or sees a great deal of precipitation, the use of high temperature paint over the welded areas can help to prevent surface rust and premature corrosion.
