7. Using a **3" Clamp**, install the **Rear Tail Pipe** into the **Muffler**, keeping the mounting tab above the **Front Tail Pipe** mounting tab and attaching with the supplied **5/16" Bolt, Washer** and **Panel Nut**.

Refer to **Figure 10 and Page 1**.

Figure 9

10. Tighten all hardware and clamps, starting at the front and working rearward to secure the system. Check along the full length of the exhaust system to ensure there is adequate clearance for fuel lines, vent lines, brake lines, frame, bodywork, suspension and any wiring, etc. If there is any interference detected, relocate or adjust to provide adequate clearance. Ensure all clamp connections are secure and components are unable to rotate or slide. Band clamps require approximately 45 lb-ft (60 N-m) of torque. Verify clearances, system security and band clamp torque after 30-60 miles (50-100 km) of driving.
